DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-5 and 13-15, drawn to a method and apparatus of selectively producing comfort noise in a computer network-based telephone system, classified in class 370, subclass 286.
 - II. Claims 6-12 and 16-18, drawn to a method and apparatus of filling a gap between bursts of packets of data transmitted across a computer network, classified in class 370, subclass 528.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, inventions I and II have separate utility such as producing comfort noise and filling a gap between bursts of packets of data transmitted across a computer network. See MPEP § 806.05(d).

2. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
3. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
